- 1.OFF
- 2.Night light
- 3.Brightness Reduce
- 4.Brightness Increase
- 5.Lighting on/off from one side to the other side
- 6.Lighting on/off from one side to the other side
- 7.Cylic transformation
Gradually brighten - Gradually darken
- 8.ON/Brightness 100%

230V~ 50Hz, 1 x LED 40W

The light should not be operated on an external dimmer.

Description of how the light works without the remote control unit:

If the light is switched on via the main switch / wall switch, the unit provides the lighting scenario which was always kept 100% brightness (3000K).

Attention! If the light was last switched off using the remote control unit, it cannot be switched on again via the wall switch due to the memory effect.

Description of how the light works with the remote control unit:

The enclosed remote control unit can be used universally for all lights of this type. This also means that several lights can be controlled with the same remote control unit.

The synchronous controlling of several lights is not intended.

Operation of the remote control:

Button 1

OFF: The light is switched off completely.

Button 2

Night light: The night light is switched on. The main light slowly fades if it was switched on previously.

Button 3/4

Brightness regulator: The adjustment takes place in stages. By pressing for a short period, it is possible to control the individual stages.

Button 5/6

The adjustment takes place in stages. By pressing for a short period, it is possible to control the individual moon stages from one side to the other side.

Button 7

Mode: Cyclical transformation
Gradually brighten - Gradually darken

Button 8

On: The light is switched on completely.
